

# Corporate Document: Greenhouse Gas Emissions Transparency

## Introduction

At Zania, we are committed to sustainability and transparency in all our operations. As part of this commitment, we provide detailed data on our greenhouse gas (GHG) emissions to our stakeholders. This document aims to meet the transparency requirements for emissions from our final manufacturing stage facilities and the final product.

## Greenhouse Gas Emissions Data

Zania strives for environmental stewardship and sustainability. However, it is important to clarify that Zania is not entirely zero emissions. We have offset 5% of the indirect emissions from electricity used in the production of our C2C certified product over the past three years.

The total emissions, including both direct (Scope 1) and indirect (Scope 2) emissions, are not entirely communicated or explained in previous reports. Specifically, our operations generate 92 tons of CO2 equivalent annually from indirect emissions due to electricity usage. Of these, we have compensated 3% per year for three years.

## Transparency and Data Availability

To comply with transparency requirements, we have made our GHG emissions data, showcasing our efforts and compensation activities, available through our corporate website. Stakeholders can access these data at the following link:

## Zania Sustainability Report

In this report, we provide detailed information on our strategies for maintaining and reducing emissions, sustainability initiatives, and future environmental management goals.

## Commitment to Sustainability and Cradle to Cradle

At Zania, we are committed to not only reducing our GHG emissions but also adopting the Cradle to Cradle (C2C) approach in our production process. This approach is based on the principles of the circular economy, ensuring our products are safe, reusable, and sustainable from creation to end of life. Our commitment to Cradle to Cradle includes:

**Safe and Sustainable Materials:** We select materials that are non-toxic and can be safely recycled or composted.

**Design for Reuse:** Our products are designed to be disassembled and reused, reducing the need for virgin raw materials.

**Renewable Energy:** We strive to use renewable energy in all our production processes.

**Water Management:** We implement water management practices to minimize the use and contamination of this vital resource.

**Social Fairness:** We promote fair and safe labor practices throughout our supply chain.

Our C2C product exemplifies our commitment to these principles, striving to minimize emissions throughout its production process. We continually aim to improve, reducing the environmental impact of our products and contributing to a more sustainable future.

## **Conclusion**

Achieving and maintaining zero GHG emissions is a goal we strive for, but we acknowledge the reality of our current status. Our commitment to the Cradle to Cradle approach and transparent reporting of emissions and compensations are fundamental parts of our sustainability and corporate responsibility strategy. We invite all our stakeholders to review our emissions report and join us in our efforts towards a more sustainable and circular future.
